Overview

To obtain a challenging and rewarding position where I can further my career as a front-end web developer, and utilize technologies such as HTML5, CSS3, and JavaScript to create intuitive, elegant, and cutting-edge user experiences.

- Self-taught web developer able to build projects from the ground up -- from concept, navigation, layout and interactivity.
- Fast learner, hard worker and team player.
- Always keeping up with all the latest web and development trends and advancements.

Skills

HTML5 CSS3 JavaScript jQuery Bootstrap API Responsive Design PHP

Projects (Links to view projects available on my personal website.)

Wikipedia Search

HTML CSS JAVASCRIPT JQUERY AJAX API INTEGRATION RESPONSIVE DESIGN

This project sets out to add a bit of color to the dull and colorless Wikipedia search results page. Though, Wikipedia is a great resource for information and articles on a number of topics, it is not exactly a sight for sore eyes. Users can search Wikipedia the same way they do on the main site, but with the added benefit of a more vibrant UI design. The Wiki Search Engine also provides users with a link to a random wiki article if they are feeling adventurous.

Cinema Seeker

HTML CSS JAVASCRIPT JQUERY AJAX API INTEGRATION RESPONSIVE DESIGN

This app lets users search through the TMDb movie database and provides them with info about a various number of movies depending on the number of results found based on the users search terms. Users will be provided with info such as titles, descriptions, posters, release dates and more as I continually add new features.

Check Local Weather

HTML CSS JAVASCRIPT JQUERY AJAX API INTEGRATION RESPONSIVE DESIGN

This app provides users with a quick and easy way to check their local weather by getting the user coordinates with Geolocation API and provides the user with the current weather forecast for their area from the OpenWeatherMap API. The background image changes with the status of the weather to give the user an idea of what it might look like outside.

Quotes to Make Your Day Better

HTML CSS JAVASCRIPT JQUERY RESPONSIVE DESIGN

This project was built with the intention to help a user looking for a great quote, but doesn't feel like searching for them. Using Javascript and the jQuery library, the site provides the user with a random quote with the simple click of a button. It's great for a quick pick-me-up or a shot of inspiration.

San Antonio City Guide

HTML

CSS

RESPONSIVE DESIGN

IMAGE OPTIMIZATION

This is my first project that I made when I first began to learn about web development. I had family coming into town and I figured I could use my new web development skills to make a city guide for them. It was a perfect opportunity to test out my new skills and create something useful as well.

Portfolio Site

HTML

CSS

RESPONSIVE DESIGN

JQUERY

This is where I showcase some of the projects I have been working on. I thoroughly enjoy updating and adding all the little pieces here and there that brings it all together. As my web development knowledge grows, so will my portfolio and it will be a great way to keep track of my progress and career. It also is a portal to my personal web development blog.

Education

San Antonio College (2010 - 2012) - Associate of Science, concentration in General Science
